

Resazurin features vs survival under each salinity condition

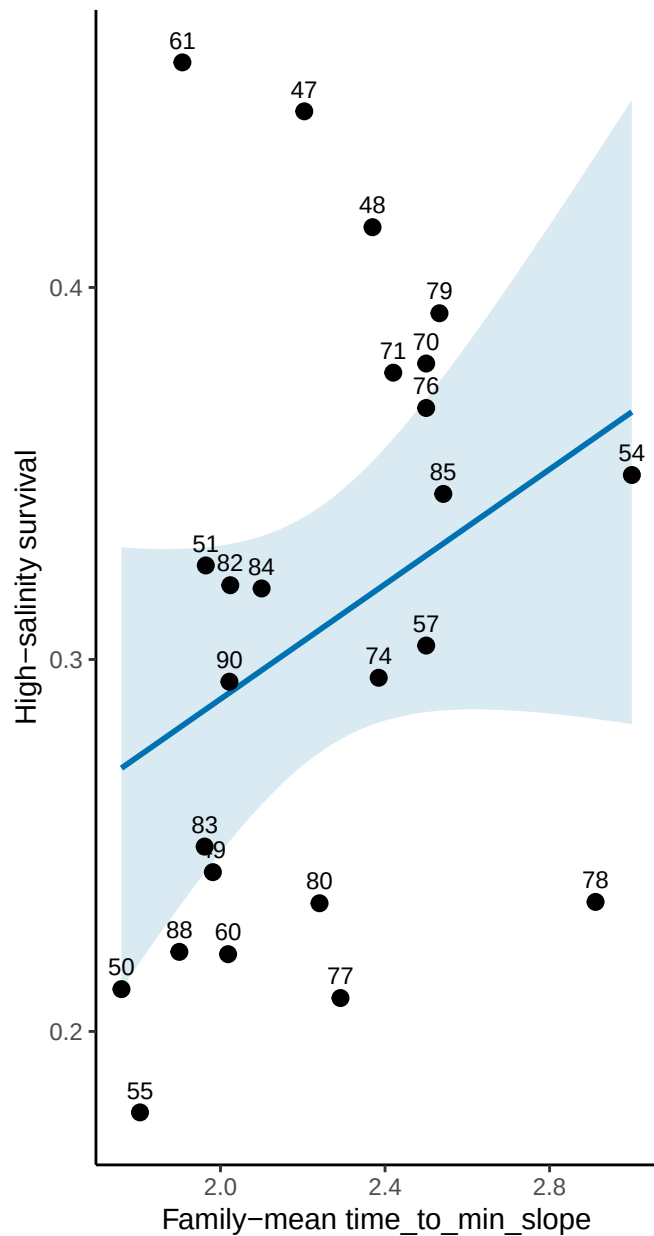

Feature predictive power: high-salinity vs low-salinity survival

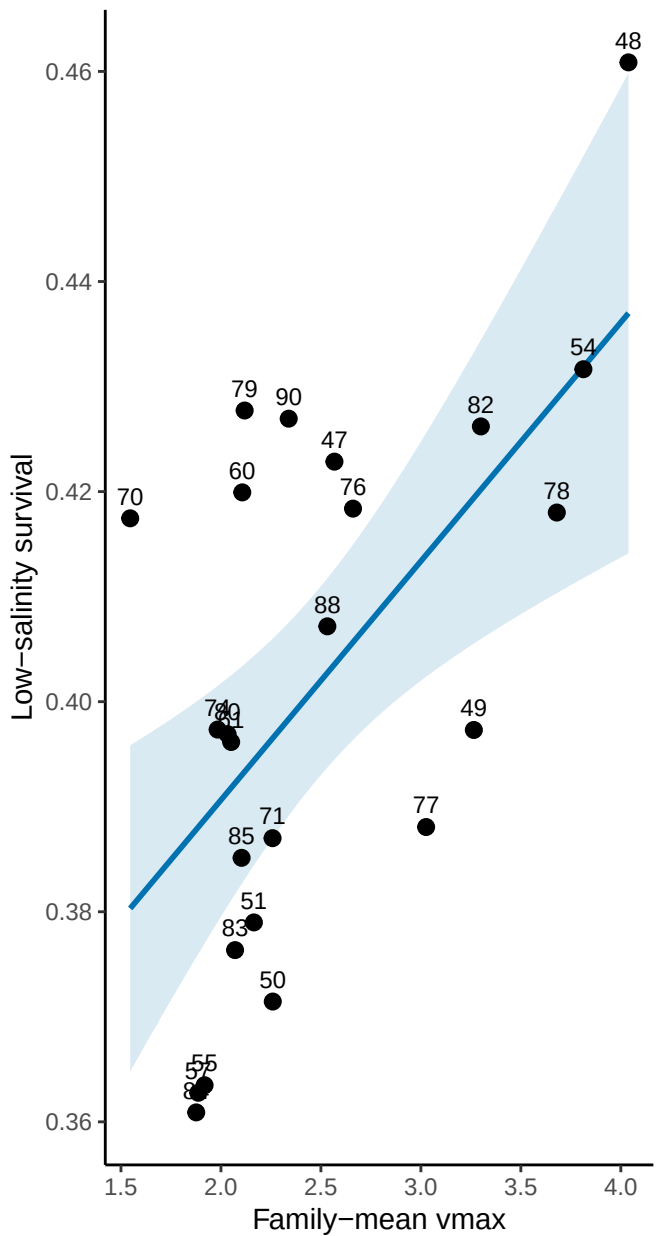

Dashed line = equal prediction; points above = better low-sal predictor

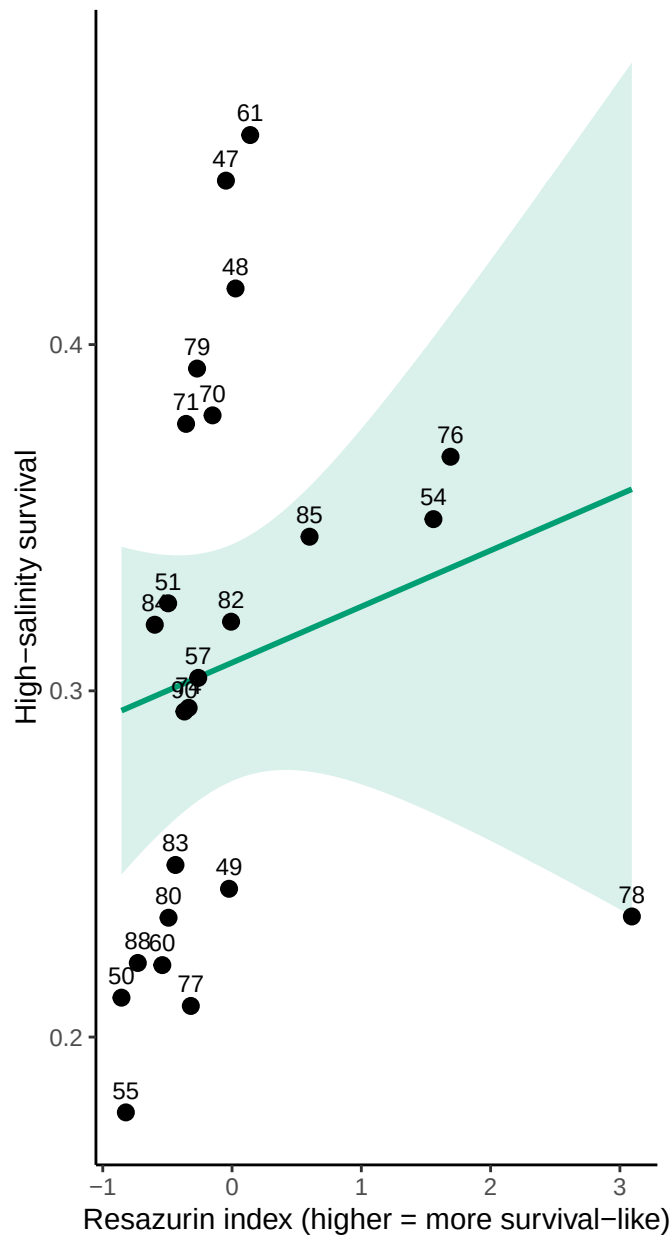

A High-salinity survival
Best predictor: time_to_min_slope (low-salir

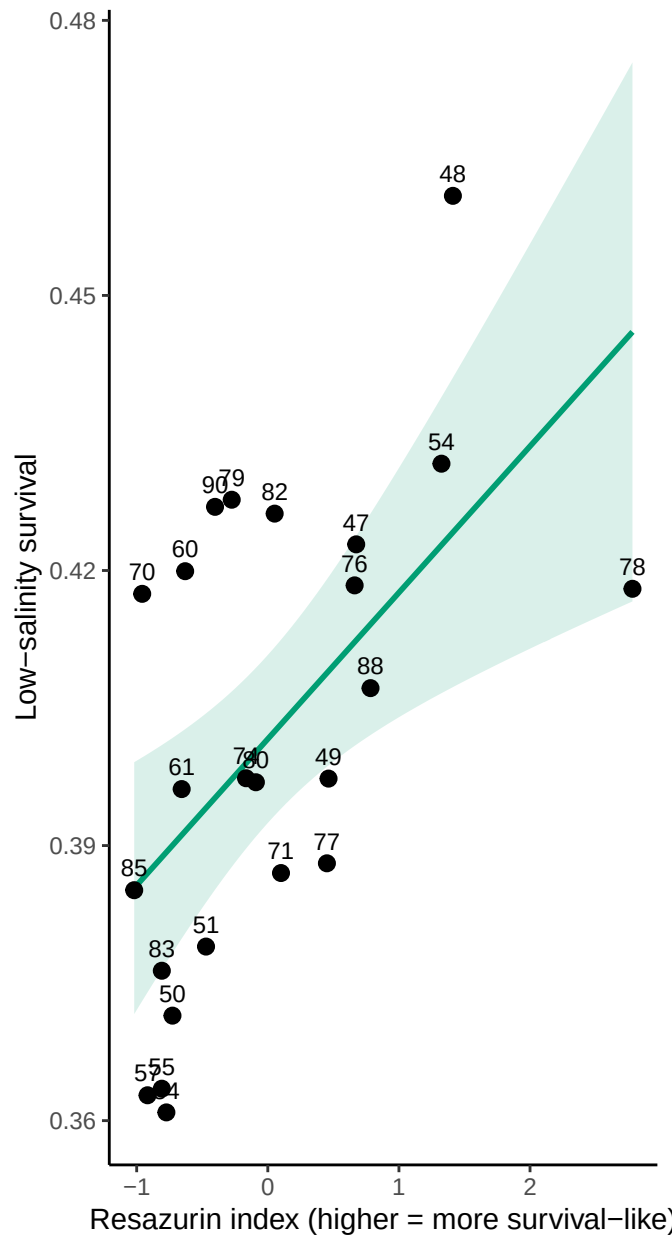

B Low-salinity survival
Best predictor: vmax (low-salinity) | rho = 0

A High-salinity survival
group = low-salinity | LOFO-CV rho = -0.26

B Low-salinity survival
group = low-salinity | LOFO-CV rho = 0.53

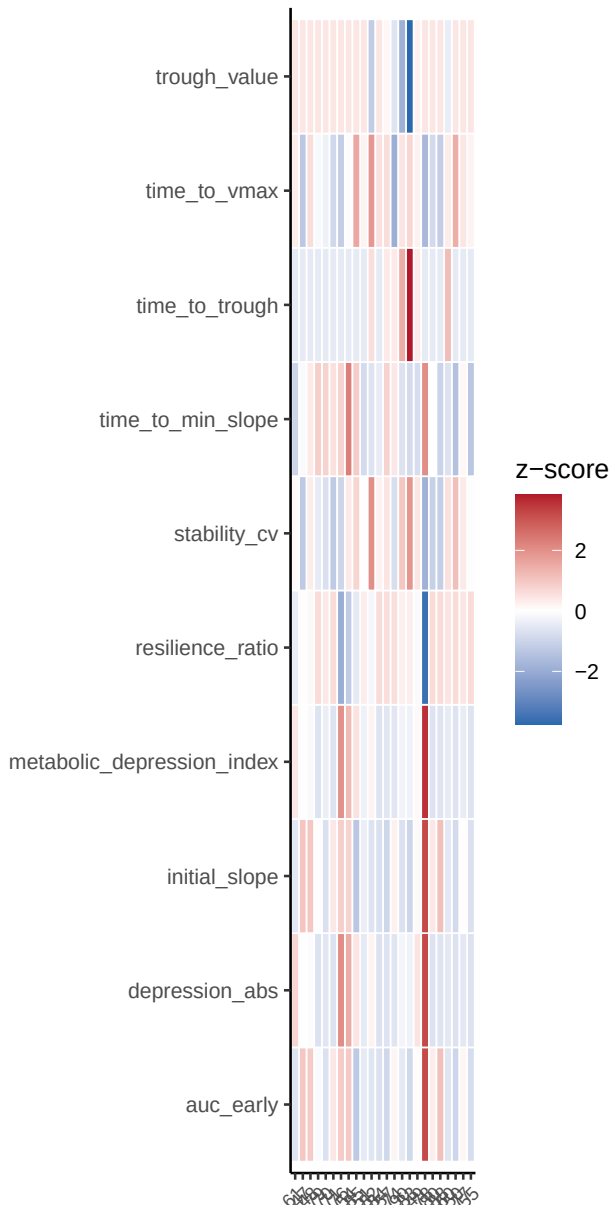

A

High-salinity survival

group = low-salinity (left = best)

Curve feature

**B**

Low-salinity survival

group = low-salinity (left = best)

Curve feature
